

Always there is a question in my mind, why light is so important in our life or within the nature. Is light really the power of all creation in this universe or it's an existence against all darkness. What would be the significance of the light without darkness or it's an independent entity which helps us to see every thing through our eyes. For me light means hope and hope creates energy that helps me to be active while taking photographs. Use of light properly in a street shot is vital. For Example when we have to deal with back-light the chances are that subject's front portion can be dark or in silhouette state. But at the same time using it in your favor can create beautiful images.

In this photo series you will find the relation between lights and women. We are being able to see lights due to our mother. Here all women are symbol of lights and power that control the entire universe. First it's a creation of life and then protection by praying to all mighty god. They are the perfect embodiment for creation, preservation and protection. They are doing their duty everyday without any support or encouragement. Its like mother nature who never wants anything from us rather giving all the time. They are always busy doing all good works for others even in their stolen moments. When a women acts anything that is good for the society is salvation for me as a human being. Stealing all that moments with rhythm was my prime objective .
