

## Women's hidden homelessness

My photos series is describing the women who are having an experience with homelessness situation . The whole project is based in Prague, Czech Republic, where the situation of homeless people rapidly changed, since the communism was over. Women homeless experience is very different from the mens one experience. Women often face up the situation of incredible uncomfot of missing everyday needs, aggressive behavior from the surrounding. They usually question the base of their sexuality depanding on the experience from the street. Some of them get support but unfortunately the government system is so complicated that most of them give up the idea of their future life. They live day from day trying to forget about their existence.
